AASHTO T-299 Results:

Lab No.	Core #	Location	Comp Str, psi	ASR Level

Observations:

Lab No.	ASR Indicator Observations

ASR Level: **Low** – ASR is minimal and represents either a new pavement or one with non-reactive Materials. It should have a good service life.
Moderate – ASR is typical of a 20-year pavement. It is slowly progressive and is about the half way point. For pavements > 20 yr it is acceptable, for pavement < 10 yr a concern.
High – The ASR is severe. It is either showing signs of pavement deterioration or is sufficiently advanced that deterioration is soon expected.
